DCLS Web - Standar	dization			

Appendix A_0910 Page 5 of 13

Appropriation Act/Funding Status Fully Funded GF/NGF 100%

DCLS is emerging as a key player in local, State, Regional, and National emergency preparedness and response planning, as well as, disease outbreak management. In this new role, DCLS has a need for mission critical laboratory informatics systems that are interoperable, integrated, and more intuitive than ever before.

The current DCLS website is static and uses older technology that does not facilitate doing e-business with the Lab. This site needs to be replaced with an application that integrates with the major LIMS applications by offering on-line sample submission, test ordering, KIT ordering, on-line KIT payment, sample tracking, and result reporting.

This site will also be used to expand the lab's e-business by allowing customers to register to participate in electronic data exchange initiatives, receive lab alerts, download catalog of services by customer, obtain on-line lab certification, and complete and submit other lab related forms on-line.

This site will improve overall customer service levels and emergency response capabilities by reducing the number of phone inquiries received by various labs at DCLS, minimizing the amount of data entry for sample processing, improving sample receiving and tracking abilities, reducing the number of paper reports mailed to customers, improving sample processing times, and expediting result reporting.
